Notice Regarding Selection of Our Consolidated Subsidiary as a Prime Contractor Candidate under NASA's CLPS 2 Moon Base Program

ispace, inc. ("ispace") hereby announces that its consolidated subsidiary, ispace technologies U.S., inc. ("ispace-U.S."), has been selected as a prime contractor candidate under the Indefinite Delivery/Indefinite Quantity ("IDIQ")(Note 1) master contract for the Commercial Lunar Payload Services 2 ("CLPS 2") program conducted by the National Aeronautics and Space Administration ("NASA"), as set forth below.

1. Overview of CLPS 2

Commercial Lunar Payload Services ("CLPS") (Note 2) is a NASA program through which NASA procures lunar payload transportation and related services from U.S. commercial providers for scientific research, exploration, technology demonstrations and other purposes. CLPS 2 is a follow-on to the original CLPS IDIQ contract and includes a 10-year base ordering period with a 5-year option period, with a not-to-exceed contract ceiling of US$10 billion. Selection onto the IDIQ does not itself constitute a funded mission. Rather, it makes ispace-U.S. eligible to compete for individual task orders to be issued by NASA.

Note 1: An umbrella contract under which contractors are selected in advance and individual orders are issued for specific requirements.
Note 2: Commercial Lunar Payload Services: NASA's commercial lunar payload transportation services program.

2. Impact on financial results

This matter will have no impact on ispace’s consolidated earnings forecast for the fiscal year ending March 31, 2027. ispace will promptly announce if it is determined that there are any matters that require disclosure.
